SONAR CLARITY
Your complete and instant software inventory!

Tired of tech stack chaos and wasted money?
With Sonar Clarity, see **everything** your employees use, in **real-time** with an **automated mapping** of your tools and users.
Banish shadow IT, tighten security, and optimize your SaaS spending.

50% of subscriptions are taken out by a department other than IT (Microsoft)

99% of cloud security breaches are caused by application or user configuration problems (Gartner)

371 SaaS applications per company on average in 2023, i.e. +33% vs 2021 (Productiv)

30% SaaS budgets could be saved: duplication, under-utilization, etc. (ITAM review report)

Plan your rationalization roadmap with Sonar Clarity :

Consistently optimize your tech stack, ensure the security of your employees' application environment, find all your live mapping information in one place.

- **Complete inventory**
Applications, SaaS, subscriptions, user lists, departments, contracts, costs, risks, App catalog

- **Detection of security risks**
Unlisted free applications, SSO Pro on personal applications, Duplicates, Shadow IT, RGPD, CVE, employees sharing credentials, information upload on non-authorized apps

- **Re-negotiation of existing contracts**
Renewal alerts, Usage assessment, Alternative proposals, User feedback

- **Cost & usage rationalization**
Advanced detection of sage vs Licenses, Price vs Benchmark, Dormant applications, contract management (Contract reading / Detection of prices, renewal dates and license plan & number)

- **Boost employee adoption and bridge the gap between IT & business teams**
Dynamically engage employees with real-time feedback, compliance nudges, and redirects to approved solutions using advanced extension technology.

- **Support & Consulting**
Operational and strategic support from certified partners (SAM, license purchasing, security, etc.)

An intuitive and modern platform

SONAR CLARITY : for whom?

Business / Finance
Monitoring of current budgets and more accurate projections. Economies of scale

IT
Productivity gains for IT and a multiplied impact

Business
Facilitating business/IT collaboration for better overall performance

Procurement
Ensure budget governance and optimize purchasing and renewal costs

Legal
Legal risks / speeding up the contract approval and sorting process

Security
Detecting data breach risks

Do you have a live inventory of all the softwares used by all your employees, including licenses?
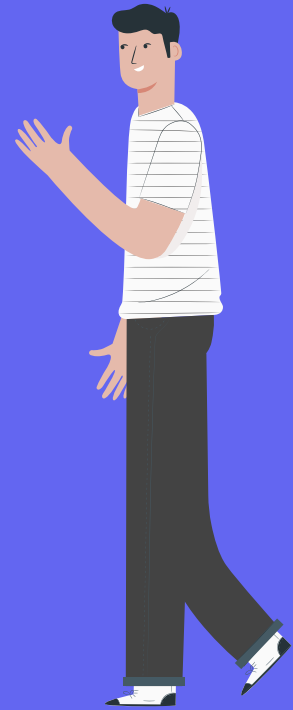

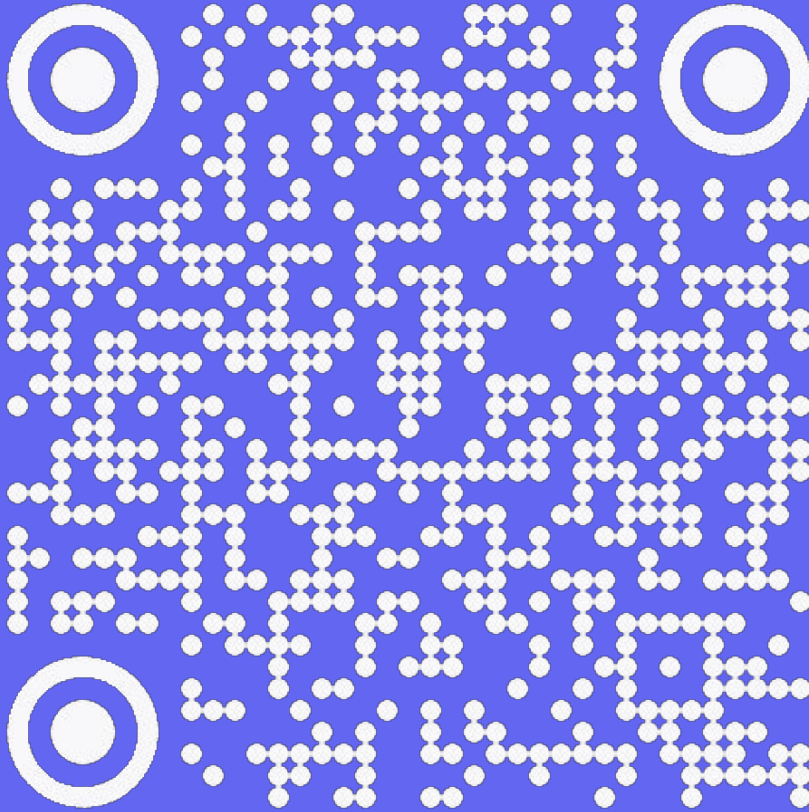

Do your employees really use the softwares provided?

Software Inventory
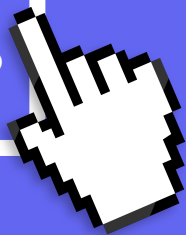

Usage

Risks

Budget

Applications (including shadow IT) being used by your employees present security risks for your organization?

Could your SaaS and subscription budget be optimized or rebalanced?
